Data Privacy Beyond Specification is Enforcement

Bradley Malin
School of Computer Science
Carnegie Mellon University
October 31, 2005

Carnegie Mellon
DATA PRIVACY LAB

Traditional Beliefs

- We know how to protect privacy:
 - "If You Encrypt, They Must Acquit"
 - (Cryptography, Secure Storage)
 - "Make Strong Barriers"
 - (Authentication, Network Security, Intrusion Detection)
 - "Inform Collectors and Users"
 - (Policy Specification, Auditing)
 - "Don't Share Identity"
 - (Federal Agencies, Data Brokers, Crediting)

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Carnegie Mellon
DATA PRIVACY LAB

Security for Privacy?

The diagram illustrates a data flow from a person to a computer, then to another computer, and finally to another person. Red dotted lines represent security measures: a lock icon for authentication, a key icon for authorization, and a shield icon for encryption.

- Authorization: allowed to read/write data
- Authentication: login with password
- Encryption: to avoid eavesdropping

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Carnegie Mellon
DATA PRIVACY LAB

Security for Privacy?

This diagram is similar to the previous one but includes a callout from a person's head saying "Can I see some anonymous data?".

- Authentication: login with password
- Authorization: allowed to read/write data
- Encryption: to avoid eavesdropping
- But Data Can Re-identify!

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Carnegie Mellon
DATA PRIVACY LAB

Security for Privacy?

This diagram is similar to the previous ones but includes a callout from a person's head saying "Ah! I know who this is!".

- Authentication: login with password
- Authorization: allowed to read/write data
- Encryption: to avoid eavesdropping
- But Data Can Re-identify!

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Carnegie Mellon
DATA PRIVACY LAB

Ah-ha! it's the Data: Define a Privacy Policy

- Cheer for the many benefits!
 - Procedure
 - Specifies how data can (not) be used
 - Logical Cognition
 - Demands active involvement & thought regarding information
 - Standardization
 - equal opportunity
 - Legal Enforcement

L. Cranor. Web privacy with P3P. O'Reilly & Associates. Sebastopol, CA. 2002.
W. Stufflebeam, et al. Specifying privacy policies with P3P and EPAL: lessons learned.
Workshop on Privacy in the Electronic Society. 2003.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Why? Legal Aspects

- United States
 - Federal / State level
 - Privacy Act of 1974
 - Privacy on the WWW
 - Educational (FERPA)
 - Wiretap & Surveillance Laws
 - Financial (GLB)
 - Medical (HIPAA)
 - Minors (COPPA)
 - ...

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Why? Legal Aspects

- United States
 - Federal / State level
 - Privacy Act of 1974
 - Privacy on the WWW
 - Educational (FERPA)
 - Financial (GLB)
 - Medical (HIPAA)
 - Minors (COPPA)
 - Wiretap and Surveillance Laws
- Europe
 - Data Directive 95/46
 - Safe Harbor and US
 - ...

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Let's Consider FERPA (Buckley Amendment)

- Family Educational Right to Privacy
- Applies to: schools receiving funds from US Dept. Educ.
- If school permits the release of students' educational records w/o written consent of parents → Federal funding refusal
- Parents or eligible students have rights
 - Inspect/review student's school's education records
 - request school correct records believed to be inaccurate/misleading

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

FERPA

- Schools may disclose, without consent, "directory" information, such as:
 - Name
 - address
 - telephone number
 - date and place of birth
 - honors and awards
 - and dates of attendance
- Schools must alert parents/students about directory and allow request not to disclose
- Schools must notify parents and eligible students annually of their rights under FERPA

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

FERPA in Practice

- Many schools' privacy policies state they choose not to post any (or minimal) directory information on their students
- Example: MIT
 - "7.2 School, department and lab web pages - Faculty, staff and students *MUST EXERCISE CAUTION IN POSTING DIRECTORY and other information to a web page that is accessible to MIT and/or to the public. STUDENTS HAVE THE RIGHT TO WITHOLD DIRECTORY and other information from public distribution. FACULTY AND STAFF MUST RECEIVE PERMISSION to post personal information and identification photographs to web pages.*"

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

FERPA in the Face of Technology

- *RosterFinder* – software program finds online name "lists"
 - Leverages Google API
- Applied to gather undergraduate information
 - Discovered many directories of undergraduates online → not supposed to be there
 - Improper communication and privacy policy enforcement

L. Sweeney. Finding Lists of People on the Web. *ACM Computers and Society*, 34 (1) April 2004.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

FERPA in the Face of Technology

- Precision of rosters by RosterFinder results
 - M: manually
 - R: RosterFinder
 - Pos: ranked position
 - Tot: total number of docs
- Increasing ability to gather data & infringe on privacy!
- But can also automated policy enforcement

School	Prec	M	R	Pos	Tot	Legend

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Great, you Defined a Privacy Policy? But Wait a Minute...

- But consider some of the limitations
 - Need robust language (*P3P* and *EPAL* are the beginning)
 - Scope of world / interaction
 - Syntax, not semantics
 - Need enforcement
- Enter data privacy:
 - WHERE does data come from?
 - WHAT does data reveal?
 - HOW do we prove data does not reveal more than specified?

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

What is Data Privacy?

- The study of computational solutions for releasing data such that
 - data remains practically useful while
 - aspects of subjects are not revealed.
- Privacy Protection ("data protectors"):
 - release information such that entity-specific properties (e.g. identity) are controlled
 - restrict what can be learned
- Data Linkage ("data detectives"):
 - combining disparate pieces of entity-specific information to learn more about an entity

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

"Privacy" Is Complex

Diagram courtesy of Michael Shamos.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Data Privacy is Interdisciplinary

	anonymity	rights mgt	database	ubiquitous
AI	heavy	some	light	heavy
learning	some	light	light	heavy
theory	heavy	light	some	heavy
database	light	light	heavy	some
language	light	heavy	light	some
security		light	some	some
IS		light	light	light

- "AI" primarily concerns knowledge representation and semantics
- "Learning" focuses on data mining algorithms
- "Theory" includes zero-knowledge proofs and multi-party computations

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Data. Data. Data.

- What kind of data? *All kinds!*
 - Field Structured Databases
 - Text Documents
 - Genomic
 - Image
 - Video
 - Network (Physical or Social)
 - Communications

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Anonymity & De-identification

- **Anonymous:** Data can not be “manipulated” or linked to identify an individual
- **De-identified:** All explicit identifiers, such as name, address, & phone number are removed, generalized, or replaced with made up values
- Does Anonymous = De-identified?

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

HIPAA

(Health Insurance Portability & Accountability Act)

- **Rationale:** Inconsistent state laws promulgating unnecessary difficulties in standardization, transfer, and sharing of health-related information
- A covered entity may not use or disclose protected health information
- **Exceptions**
 - To the individual that the information corresponds
 - With consent: to carry out treatment, payment, or health care operations
 - If consent is not required: same as above, but not with respect to psychotherapy notes

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Data Sharing Under HIPAA

- **Safe Harbor**
 - Data that can be given away
 - requires removal of 18 direct and other quasi-identifiers
Includes: name, address, zip code, phone number, birthdate, no geographic smaller than a state
- **Limited Release**
 - Recipient contractually agrees to not use or disclose the information for purposes other than prespecified research and will not identify or contact the individuals who are the subjects
 - May include specific geographic locations (i.e. zip code)
- **Statistical or Scientific Standard** (*we'll return to this*)

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Healthcare Reform At Work

- Collect and disseminate hospital discharge data
- Attributes recommended by *National Association of Health Data Organizations* for disclosure

BUT... this is outside the jurisdiction of HIPAA (9)

□ Patient Gender	□ Physician ID Number
□ Patient Racial Background	□ Physician Zip Code
□ Patient Number	□ Total Charges
□ Visit Date	

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Linkage

- Use combination of attributes to determine the uniqueness of an entity in a dataset
- Second dataset with identified subjects is used to make the re-identification by drawing inferences between the two datasets on the related attributes
- The attributes do not have to be equal, but there must exist some ability for inference of between attributes.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

False Protection Example

Name	Address	Diagnosis	Treatment	DNA
John Doe	1 Some Way	33321	1230	accta...a
Jane Doh	2 No Way	82132	9012	agctt...c

Name	Address	Diagnosis	Treatment	DNA
John Doe	1 Some Way	33321	1230	accta...a
Jane Doh	2 No Way	82132	9012	agctt...c

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DNA Re-identification

- Many deployed genomic privacy technologies leave DNA susceptible to re-identification
- DNA is re-identified by automated methods, such as:
 - Genotype – Phenotype (G-P) Inference

DNA	INFERRED DISEASE	INFERRED DISEASE	Name	Address	ICD-9
acctt...a	Cystic Fibrosis	Huntington's Disease	John Doe	1 Some Way	3334
agctt...c	Huntington's Disease	Cystic Fibrosis	Jane Doh	2 No Way	277

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DNA Re-identification

- Many deployed genomic privacy technologies leave DNA susceptible to re-identification
- DNA is re-identified by automated methods, such as:

DATA PRIVACY LAB

Video Data Privacy Goal

- Modify video images so that
 - Privacy: automated attempts to recognize faces fail
 - Utility: knowledge learned from data is useful
- Solution to problem
 - Enables sharing of data for specified purposes
 - Protects rights as specified in policy
 - e.g. your identity won't be revealed unless you have done something illegal

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

Carnegie Mellon
DATA PRIVACY LAB

The “Good” Side of Surveillance

- Homeland security monitoring
 - Monitor number of faces over time
- Early bioterrorism detection
 - Monitor for respiratory distress

L. Sweeney and R. Gross. Mining images from publicly-available cameras for homeland security. In Proceedings of the AAAI Spring Symposium. 2005.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Protection Post / During Capture

- Can we study video and image information for surveillance purposes with identity protection?
- Example: can we track people, but withhold identity?

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

A Solution: The "Dot" Approach

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

De-identifying People

- More detailed
- Silhouettes and coloring for tracking

(Andrew Senior
--- IBM)

A. Senior, et. al. Enabling video privacy through computer vision. *IEEE Security and Privacy Magazine*. May-June 2005; 3(3): 50-57.

DATA PRIVACY LAB

Alternative De-identification

- Masking and environmental suppression (More from Andrew Senior - IBM)

Original People Removed Back Removed People Silhouette

Andrew Senior. <http://www.research.ibm.com/people/a/aw/s/>

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

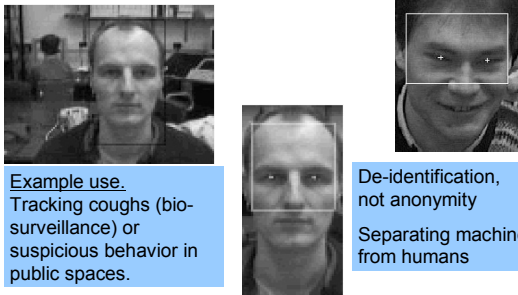

Can we make Video Privacy More Formal?

- De-identification for some uses can be achieved by
 - replacing people with dots or
 - replacing faces with blobs.
- In each case, de-identification is achieved but not necessarily anonymity
- What if we need to see what a face is expressing?

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

De-identifying Video Surveillance Data

Example use.
Tracking coughs (bio-surveillance) or suspicious behavior in public spaces.

De-identification, not anonymity
Separating machines from humans

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Example: De-identification of Faces

Captured images are below. Here is a known image of Bob. Which person is Bob?

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Why Try These Crazy Things?

- Many people and organizations claim they work

Gaussian Blur

Pixelation

M. Boyle, C. Edwards, and S. Greenberg. The effects of filtered video on awareness and privacy. ACM Conference on Computer Supported Cooperative Work. 2000.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

But Why Should We Care?

Policy Sidebar

- European Data Directive
 - Collected video and images can not be released unless they have been sufficiently protected
- Contents "pixelation" is sufficient criteria for identity protection

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

More De-identification Ideas!

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

Don't be Naïve

- Again, de-identified ≠ anonymous
- Masks can be removed and trained against
- Some cases naïve de-identification even harms privacy!
 - pixelation and "blur" may improve performance
- Time to get logical...

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

DATA PRIVACY LAB

k-Protection Models

- k-Anonymity: For every record, there are at least k individuals to whom it refers (realized upon release).

- k-Same: For every face, there are at least k people to whom that face refers. No face actually refers to a single real person.

E. Newton, L. Sweeney, and B. Malin. Preserving privacy by de-identifying facial images. IEEE Transactions on Knowledge and Data Engineering. 2005, 17(2): 232-243.

A 3x3 grid of face images labeled Select 1 through Select 9. To the left of the grid is a 'PROBE' image of a man's face.

Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

- DATA PRIVACY LAB
- ## Some Parting Thoughts
- Security + Policy does not guarantee Privacy
 - Privacy is not dead, but it requires “intelligence”
 - Interdisciplinary approach is necessary
 - Understand policy & law
 - Understand the technology
 - Understand the goals of data use
- Privacy Policy, Technology, and Law Data Privacy © 2005 Bradley Malin

- DATA PRIVACY LAB
- ## Thanks!
